SARAH, 31 YEARS OLD

TIME: New brand manager from a strategy consulting background who is optimistic and passionate about working at GM.
QUOTE: "That's such an interesting idea! Let's try it out and see how it goes."
ABOUT: Sarah is a 31-year-old new hire at the Performance Center. She was born and raised in Detroit.

GOALS/TASKS: Sarah loves doing a great job and working in auto, but was tired because her interests her enthusiasm and new ideas for the brand. She's trying to find things because she is willing to try things flexible when she, or someone she works with, has.

NEEDS/IMPLICATIONS: Sarah wants to feel that what she does so that she is more engaged with it more connected to the company as a whole.

FEARS AND FRUSTRATIONS: Sarah expected she was used to, but was still shocked at how fast and no one took her to lunch, barely anyone introduced close camaraderie she felt with her colleagues who.

Sarah also wants to connect with more people, act change and help GM win. She's starting to realize it better and force her ideas through with the job so far have a "same old" attitude. She gets the old enthusiasm behind her back, however, she does it working with her, so she's been focusing on today.

BEN, 45 YEARS OLD

TIME: Tenured senior employee with an offer from another company.

QUOTE: "I don't think that would work in our market."

ABOUT: Ben is a 45-year-old VP in GM's Asian business unit. He has been an employee at GM for about 15 years, working his way up through various engineering and product development roles, and he has been a VP for three years. He holds a degree in mechanical engineering from Cambridge University and an MBA from INSEAD. He lives in China with his wife, and his two children are attending university at his alma mater in the UK.

GOALS/TASKS: Ben is proud of how far his career has progressed at GM. Lately, he's been seeing as though there is no more upward mobility at GM, especially since he doesn't live in Detroit. He really enjoyed the time he spent living in the UK when he was younger, and was recently recruited to become CEO of a large manufacturing firm based in London, England. Ben and his wife have been contemplating moving to London, since their children both live near there and this would be a great career progression for Ben.

NEEDS/IMPLICATIONS: Ben needs to feel like his contribution matters and that there are career growth opportunities for him at GM, but right now, at least, this doesn't seem to be the case.

FEARS AND FRUSTRATIONS: Ben really likes his colleagues, but he has not been very excited by his work lately. He is frustrated by the state of his career and his unit's poor performance recently. There is a lot that affects his unit that is beyond his control, but he worries his progress is suffering because of it. He fears that he is falling behind his peers in terms of status, salary and impact.

WHY IS HE A CHALLENGER? Ben already has one foot out the door, with familial ties pulling him even more strongly to leave his job. There would need to be a drastic change in his circumstances to enable him to stay and thrive at GM.

AND YET NO AUTOMOTIVE COMPANY HAS FIGURED OUT STORAGE FOR THEIR PURSE.....

CO:LAB 4-CARGO MANAGEMENT

Challenge: How can we re-imagine the cargo management system in order to exceed customer needs and expectations?

30% of the revenue from accessories comes from cargo management!

2/3 of the top accessories purchased for full line trucks were related to cargo management.

Workplace Design

CO:LAB CYCLE

- 1. IDEATE**
It's time to activate both sides of your brain to come up with as many solutions as possible to your Core Challenge statement. Disregard any potential restrictions and focus on generating as many ideas as possible!
TIP: If you get stuck use a fuel card, visit a fuel station or ask a mentor.
- 2. PROTOTYPE**
A prototype is a "quick and dirty" way to test your solution. The format for a prototype varies widely depending on your solution, resources available and the ingenuity of your team. Your prototype could take the form of a drawing, a skit, wireframes for an app or website, a 3D model using available materials, an interview, a Q&A session, etc. Be creative, and don't be afraid to ask the mentors for help.
TIP: If you get stuck visit the prototyping fuel station.
- 3. COLLABORATE**
Once you have a prototype, you can share it with mentors and fellow participants in order to get feedback. This will enable your team to learn what works, and what doesn't, so that you can rapidly iterate to create a continuously improved solution.
TIP: If you get stuck use a fuel card, visit a fuel station or ask a mentor.
- 4. REVISE**
Once you've gathered feedback on your solution, your team can regroup and discuss how to make it better.
- 5. REPEAT**
Repeat steps (3-7) Throughout the hours of CO:LAB, you can and should go through multiple iterations of ideating, prototyping, collaborating and revising. This process is about continually learning and improving to come up with the best solution in a short period of time.

POSITIVELY DISRUPT THE WAY WE WORK

At GM we have set out to positively disrupt the way we go about our business. GM2020 is about everyone working together to reimagine and reshape the way we work. Join us to become members of a core group of change agents – people who are helping GM become the workplace it needs to be in today's competitive world. Look through this site to find ways to learn more, participate in an organized GM2020 event, find a local group of like-minded change agents, and share success stories.
